

A financial passport for every African *business.*

Creditlinker gives every business a simple passport that shows lenders, suppliers, and partners exactly how strong that business really is. Built from real numbers, not paperwork.

 **CONFIDENTIAL**

2026 giwamicheal@creditlinker.com.ng

— THE PROBLEM

Millions of businesses are doing well. Most cannot prove it.

"Six years in business. Steady income. Never missed a payment. Turned away by every lender. Not because her business is weak. Because no one could see that it was strong."

01

Most small businesses have no record a lender can actually check. Years of real activity, and nothing simple to show for it.

02

A business's money story is split across five different apps and nobody has pulled it together. There is no single, clear picture of how the business is really doing.

03

Checking a business by hand takes too long and costs too much. That is why many lenders avoid small loans, even when the business is a good bet.

04

The businesses that get funded are not always the strongest ones. They are just the ones with the right paperwork. Good performance keeps losing to good paperwork.

MARKET OPPORTUNITY

The gap is huge.
And the timing
has never been better.

WHY NIGERIA FIRST

Nigeria has over 39 million small businesses. Together they make up nearly half of everything the country earns. Yet fewer than 5 in 100 of them can get a loan. Nobody has built the system to change that. Creditlinker is starting here.

THE DATA ALREADY EXISTS

Every day, Nigerian businesses move money through banks, wallets, and payment apps. That information is real and it already exists. Lenders just cannot see it. Creditlinker gathers it, organizes it, and puts it to work.

SOLUTION

The financial passport African businesses have always deserved.

Creditlinker brings together a business's activity across **banking, payments, invoicing, and accounting** into one simple passport. Lenders see the whole picture. Businesses get funding for what they have actually built, not just what they can print out.

One Financial Passport

One passport that pulls all of a business's money activity into a single, clear profile that lenders can actually use.

A Simple Score

A score built from real transaction history. It looks at steady income, cash flow, spending habits, and savings. No guesswork.

Always Up To Date

Passports stay current. Lenders see how a business is doing right now, not how it looked months ago on an old application.

Checked and Confirmed

We check documents, identity, and data against each other to confirm every business is exactly who it says it is. Nothing gets through unchecked.

Ready For Lenders

Passports are built to slot straight into a lender's own review process. What used to take weeks can now take hours.

Easy To Plug In

Fintechs and banks can plug passport and verification data straight into their own apps. Clean, well documented, ready to build on.

— NETWORK EFFECTS

Every business that joins makes the platform stronger.

This is not just a product. It grows stronger on its own. Every business that joins makes the whole system harder to copy and harder to replace.

01

More Businesses Join

Each new business adds real, checked information to the network.

02

More Real Financial Data

We see how money comes in, how bills get paid, and how cash holds up when things get tight. And we see it across more and more businesses.

03

A Smarter Score

More data means a sharper score, fewer bad loans, and a system that keeps getting better on its own.

04

More Lenders Come On Board

Lenders and partners see real value in the passport, so they lean on it more and build it into how they work.

05

More Businesses Join

The cycle speeds up. Each turn makes the next one faster and stronger.

THE RESULT

Growing Value

The value grows faster than the number of businesses. It comes from how they connect to each other.

THE MOAT

Data

A growing record of how African businesses really behave with money. Nobody else has this, and nobody can copy it overnight.

WHAT THIS MEANS

Infrastructure

WHAT CREDITLINKER ACTUALLY IS

Creditlinker builds the **financial passport** that lets institutions understand African businesses. The company that becomes the trusted source of that passport becomes something the whole economy leans on.

— INSIDE THE PASSPORT

What's inside a Financial Passport?

A Creditlinker passport is not just one score. Think of it like a real passport, where every page tells part of the story. **Open it up and here is what you find.**

Identity

Who the business is, checked and confirmed

History

How the business has performed over time

Loan Readiness

How ready the business is to take on a loan

Investor Readiness

How ready the business is for outside investment

Business Reports

Clear reports on how the business is doing

Asset Registry

A record of what the business owns

Business Network

Who the business works with and trades with

Financing Marketplace

A place to get matched with the right lender

Proof of Integrity

Every record can be checked and confirmed

Timeline

A full, honest history that cannot be changed

Creditlinker is not just handing out a score. **It is handing over a full, trusted record of a business** that any institution can rely on.

ONE PASSPORT

— COMPETITIVE POSITION

Why banks cannot build this. Why Creditlinker wins.

People sometimes ask why a bank could not just build this too. The honest answer is that they cannot see enough to build it. It is not about money or effort. It is about what each player can actually see.

BANKS

Only see their own customers

A bank only sees the money that moves through its own accounts. Creditlinker pulls information from many banks and apps at once, building a fuller picture than any single bank could ever see on its own.

FINTECHS

Only see their own transactions

Payment apps have good data, but only for the payments that pass through them. Creditlinker connects every financial channel together into one identity that no single app can match on its own.

ACCOUNTING SOFTWARE

Only see what gets typed in

Bookkeeping numbers are typed in by hand and nobody checks them. Creditlinker pulls straight from real transactions that cannot be changed after the fact. That is a level of proof that accounting software cannot offer.

CREDIT BUREAUS

Show old history, not today

Bureaus record what already happened, sometimes months ago. Creditlinker shows a living picture that updates as the business keeps operating, something old bureau systems were never built to do.

HOW IT WORKS

From bank transactions
to a verified identity
in four steps.

01 **Connect your accounts**

A business connects its bank accounts and other money apps to Creditlinker. This lets us build a trusted financial identity from real business activity. The business stays in control of its own data at all times. Access can be turned off at any point, outside of an active financing agreement.

BUSINESS PORTAL

02 **We read the real story**

Creditlinker looks through real transaction history. How money comes in, how bills get paid, how spending is managed, how cash holds up when things get tight. All of it becomes clear, organized data.

SCORING ENGINE

03 **Receive a verified Creditlinker Passport**

The business gets a verified financial passport. A score, a full breakdown, and a profile it can share directly with lenders, trade partners, or anyone that needs proof it is credible.

VERIFICATION

04 **The passport grows with the business**

Every month of activity adds more verified history. The passport gets richer, more trusted, and more valuable over time. A financial record the business builds, owns, and controls.

ONGOING UPDATES

GO-TO-MARKET

A phased adoption path that expands the network at every layer.

How do the first 10,000 businesses come on board, and how does that grow into a million? Each stage opens the door to the next one, so the network gets stronger and stronger over time.

Stage 01 · Now Reaching Businesses Directly	Stage 02 Reaching Banks and Lenders

← Active Now	12–18 months
18–36 months	36+ months

WHAT EACH GROUP ACTUALLY GETS

Businesses A passport that proves what they have built, and access to lenders who can see it.	Lenders and Banks Verified profiles ready for review, and live monitoring so nothing surprises them later.	Fintechs and Platforms Ready-made passport and verification tools, no need to build data pipelines from scratch.	Governments Real visibility into how small businesses are doing, and a trusted tool for support programmes.
---	--	--	---

PRODUCT

Three portals today.
An expanding suite
powered by identity.

LIVE TODAY

Business Portal

Where businesses connect their accounts, build their passport, and put it in front of lenders who are ready to look at it.

Financer Portal

Where lenders check verified passports, run their own reviews, and manage their whole lending pipeline in one place.

Developer Portal

Where fintechs plug Creditlinker's financial data and verification tools straight into the products they are building.

WHAT THE PASSPORT MAKES POSSIBLE NEXT

Once a business has a trusted passport, a whole family of new products becomes possible on top of it. Each one builds on the passport. None of them replace it.

 Pulse Card

Built-In Credit

Supplier Financing

Financing Based on Revenue

Working Capital

Trade Credit

Spotlight: Creditlinker Pulse Card

A business card where the spending limit is tied directly to live passport data. Real performance drives access. No manual reviews. No made-up caps.

--- BUSINESS NETWORK

The passport also
matches businesses
with businesses.

A trusted passport is not only useful for getting a loan. It is also useful for finding the right partner to work with. Once a business is verified, Creditlinker can point it toward other verified businesses worth trading with.

A MANUFACTURER

Needs a reliable supplier

Creditlinker points to verified suppliers with a strong record of on-time delivery and steady payment behavior, not just the first name that comes up.

A DISTRIBUTOR

Needs a stable wholesaler

Matched with wholesalers that have shown real financial stability, checked against actual transaction history instead of a sales pitch.

A RETAILER

Wants trade credit terms

Matched with trading partners willing to extend credit, because both sides can see a verified record of how the other actually operates.

ANY BUSINESS

Looking for a new partner

Matched based on real, verified performance. Not guesswork. Not who happens to know who.

— INSTITUTION NETWORK

Creditlinker also matches lenders with each other.

Sometimes one lender cannot fund a deal alone, or has money to lend but not enough good deals to put it into. **Creditlinker connects institutions, too, so capital finds its way to where it is actually needed.**

WHEN ONE LENDER CANNOT COVER IT ALL

Splitting a request that is too big for one bank

If a business needs more than one lender is able or willing to fund alone, Creditlinker can connect that lender with others who have room to co-fund the request.

WHEN A LENDER HAS MONEY BUT NO DEALS

Matching capital with the right sector

A lender ready to fund businesses in a specific sector or region gets matched with verified businesses in that exact sector, instead of searching manually.

Matching capital providers with financing opportunities based on **sector, size, location, and appetite for risk.**

INSTITUTION MATCHING

MOMENTUM

We have not been waiting. We have been building.

PROGRESS

Platform	Core identity engine, scoring model, and business portal are built and live.
Product	Financer portal and developer API in active development. Pulse Card engine fully architected.
Ecosystem	Compatibility mapped across major Nigerian commercial banks, digital banks, and payment platforms.
Team	Founding team with deep expertise across financial infrastructure, data systems, and African markets.

OPEN BANKING MOMENTUM

CBN policy shifts and expanding API standards across Nigerian banks are creating exactly the technical foundation Creditlinker is building on. The window is open right now.

DIGITAL-FIRST SME ADOPTION

Nigerian businesses have moved online. Rich financial data is being generated every day at scale. It sits unstructured and unused. Creditlinker is the infrastructure that finally makes it count.

LENDER DEMAND FOR BETTER DATA

Microfinance institutions and digital lenders are actively looking for underwriting infrastructure that cuts cost and improves accuracy. The demand is real. The supply does not exist yet.

BUSINESS MODEL

Four ways to earn.
One network that
makes all of them stronger.

REVENUE STREAM 01

Business Subscriptions

Businesses pay a monthly or annual fee to keep their Creditlinker passport active, access their dashboard, and share their profile with lenders across the network.

REVENUE STREAM 02

Institutional API Access

Lenders, fintechs, and institutions pay for access to financial identity data, verification checks, and risk signals. Priced per call or under enterprise licence.

REVENUE STREAM 03

Pulse Card Interchange

The Creditlinker Pulse Card earns interchange on every transaction. Unit economics improve as more creditworthy businesses join the platform and spend through it.

REVENUE STREAM 04

Marketplace and Referral

Creditlinker connects verified businesses directly to matched capital providers, earning referral fees and commissions when financing successfully goes through.

DEFENSIBILITY

Every business that builds a Creditlinker passport adds to a dataset that no one else has. That makes scoring sharper and makes the platform more valuable for institutions. The more businesses that join, the better it works for everyone, and the harder it becomes for anyone else to copy.

THE FUTURE

TODAY

Creditlinker builds financial passports.

We turn real transaction data into a verified passport, so lenders can make faster, smarter decisions about African businesses.

TOMORROW

Institutions trust Creditlinker passports.

Banks check it before lending. Suppliers check it before extending terms. Fintechs build on it. Governments verify against it. The passport becomes something you simply need to have.

EVENTUALLY

The financial passport becomes how African business runs on trust.

Creditlinker becomes the trusted source businesses carry everywhere. Capital, suppliers, insurers, investors, and governments all lean on it to understand and trust a business at scale.

*"We are building the **trust layer** that powers business finance across Africa. The company that becomes the trusted source of financial passports becomes **something the whole economy relies on.**"*
